

A close-up photograph of a person's open palm, held flat, showing several different types of medication. There are two red capsules, one white capsule, one orange capsule, one yellow capsule, and one dark brown capsule. The background is a solid, vibrant green. Overlaid on the center of the image is the text 'MEDICINE 101' in a large, white, sans-serif font, enclosed within large white square brackets.

[MEDICINE 101]

What is this for?

Main Functions

Searching The Pills

Searching the pills with the shape, the color and the code

Providing the information of the pill including the ingredients, dosage, effects and etc.

Setting Alarms

Reminding the time to take the medicine for user and user's family

Cautions

Notification the guide line in the daily life

Warning the ingredients in conflict

WHAT IS CIMA? NOMENCLATOR GLOSSARY Log in

NOMENCLATOR FOR PRESCRIPTION

Nomenclator for Prescription is a medicine database intended to provide core prescription information to the care information services.

Nomenclator for Prescription applies to all medicinal products that have been authorised and marketed, financed and unfunded, data relating to their identification and technical information (For information also contains medicinal products Suspended, revoked or ceased to be marketed since May 2013).

The tree of medicines makes up a simpler overview of particular fields included in the Nomenclator for Prescription in excel format referring to each pharmaceutical presentation (national code). The fields covered include, inter alia, descripción clínica del producto (product clinical description) (DCP), descripción clínica del producto con formato (product clinical description pack) (DCPF), specific active ingredient for each pack size, strength, unit of strength, content and unit of content, excipients to be declared and route of administration.

By using the Nomenclator for Prescription, the user accepts, wholly and unreservedly from that very moment, all General Conditions included in the following Legal policy, without prejudice to those included in the Legal policy of the AEMPS website. In both cases, those terms could be amended.

Medicamentos

Recursos

Recurso	Descripción
GET medicamentos?{condiciones}	Devuelve una lista de medicamentos para las condiciones enviadas
GET medicamento?{condiciones}	Devuelve la información de un medicamento pasando el nº de registro o el código nacional
POST buscarEnFichaTecnica	Recibe en formato JSON como cuerpo de la petición una serie de texto a buscar en las secciones y devuelve una lista de medicamentos

Presentaciones

Recursos

Recurso	Descripción
GET presentaciones?{condiciones}	Devuelve una lista de presentaciones para las condiciones enviadas
GET presentacion/:codNacional	Devuelve la información de una presentación pasando el código nacional

Problemas de suministro

Recursos

Recurso	Descripción
GET psuministro?{condiciones}	Devuelve todos los problemas de suministro actuales
GET psuministro/:codNacional	Devuelve una lista de problemas de suministro asociados a un código nacional
